

System A – Instruction Card

TO START THE INTERACTION:

Make any small movement in front of the camera (for example, wave your hand). The system will only respond when it sees movement, it stays quiet and still until you move.

The system will ask you to say your name and what time you want a reminder to take your medication.

You can type your name, or the researcher can enter the information into the system for you.

After the system speaks, make another movement to continue the interaction.

The system is movement-sensitive, so feel free to wave or do a movement to trigger it. Please allow a few moments between each movement for the system to respond.

You are welcome to explore and interact freely with the system.

When you're ready to begin, or if you want to stop at any time, just let the researcher know.

TO END THE INTERACTION:

Tell me when you're ready to stop, and I will close the system for you.
